Covid-19 evolution, Oceania (data from JHU CSSE, 6/28/20)

- Total number of recovered
- Total number of recovered (log scale)
- Growth rate (%) of recovered
- Acceleration of recovered

Data shows the number of recovered cases over time for different regions in Oceania. The graphs illustrate the growth rate and acceleration of recovered cases, indicating how quickly the number of recovered cases doubles over time. The data is sourced from Johns Hopkins University Center for Systems Science and Engineering (JHU CSSE).

Key observations:
- The number of recovered cases doubles every 6 days in some regions.
- Growth rates and acceleration values vary significantly among regions.
